

System administration is maintenance server systems (rarely, workstations) by ACISCO staff, owned by customer and doing most operations remotely. In some cases, it's possible to take on lease some resources from ACISCO side. When company of any size give all or part of all IT-processes for maintenance by ACISCO (outsourcing), then it's possible to get high level of saving funds, by decrease expenses for staff, software and so on, to get maximum of effectiveness.

Services, offered by ACISCO, as system administration, including:

- Operating System installation, needed by customer
- Software installation
- Operating System and software configuration and adjustment
- 24/7 Operating System and software monitoring
- Operating System and software backup

- Operating System and software fixing
- Updates and patches installation for health maintenance and fix any types of bugs in Operating System and software
- Others

ACISCO company offer ready to use solution for installation next types of servers and their clusters:

- Web
- FTP
- DNS
- mail
- storages
- Remote Access, including VPN, installation and maintenance
- others, needed for customer

Also, ACISCO company can help with Active Directory installation and integration different solution on other platforms. For example, we can organize mail system, based on Postfix with authorization from AD.

On request we also provide consulting services in IT field.
